The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "said lower panel" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 3 recites the limitation "said reservoir" in line 3. There is insufficient antecedent basis for this limitation in the claim.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Golden et al. (Golden).

Re claims 1, 2 and 4-11, Golden discloses a container for holding paint, paint brushes and paint rollers. The container as shown in an upright configuration in Fig.13 comprises a drain sleeve (formed by tray insert 202 and walls 126, 127 and 140 adjacent to the height of the tray insert) and a catch pan (walls 126, 127, 136 and 140 below the tray insert and bottom wall 128). The drain sleeve has an open lower end as drainage holes 210 allow the passage of paint. Also, the sleeve could be defined as that portion of the tray insert 202 above and not including turned-up edge 204. Wall 140 represents the rear panel and insert 202 represents the front panel.

Claim 3 requires a convergence position no lower than said reservoir. Insofar as a reservoir is formed by the sleeve of the present invention, said reservoir of claim 3 could be interpreted to mean the sleeve. In the case wherein the sleeve is defined by the entire tray insert 202 (including the turned-up edge 204), the sleeve has an angle formed by the turned-up edge 204 (front panel) and lower panel 128 which converges at a position lower than the reservoir (sleeve) which is similar to the convergence position of the front panel and lower panel (bottom panel as shown in Fig. 1) of the present invention that is lower than the reservoir (sleeve).
